

Waves creating time and quality of life

Quality prefinishing to solve those spray shop delays

Where is the bottleneck in your production? What is it that slows everything down? All jobs can by-pass a bench or two in production, but all jobs have to go through the spray shop, have you got a big enough team in the spray shop? Do you have the people with the right experience? Does this sound familiar? Yes? the final process in production slows everything down.

Waves provides the solution. A pre-finished, high quality, ready for use lacquered board, which does away with all delays and frustrations associated with finishing of materials.

Our high tech finishing line produces a premium quality lacquered finish with guaranteed colour stability.

Moisture resistance

Waves is produced using an MR core MDF, and an MR glue line between core and face veneer. Veneers are finished with five layers of UV lacquer, thus making waves the ideal product to use in most wet environment applications; kitchens, bathrooms etc. A high quality moisture resistant, high durability veneered and pre finished board.

Fashion Trends

A choice of five trendsetting colours.

From the classic and natural colours of Oak and Walnut, to the dark brown of Ristretto waking you with tranquillity in the morning; the range progresses through to the light sand of Dunes to the light grey of Steam, Waves evokes a range of images of a gentle early morning mist over lightly rippled water at sunrise.

A subtle, but aesthetically beautiful range of colours on wood, to seduce even the most inspired and creative of designers.

The grain of the veneer, all in swirls and curves reaches out for images of the sea and ...waves.

Waves is an offer that will allow the designer to fulfil and interpret the vision of your customer

Technically complete and up to date

Waves stands apart from other products, its sheet size of 3050 x 1220, the choice of veneer in Oak and Walnut, the selection of veneers in crown and half crowns and then laid up in random match to create the appearance of solid wood. These, along with an environmentally friendly finish in UV lacquer make it an offer to consider before all others.

A peel off protective film on both sides considerably reduces the risk of damage during production and handling

The Waves collection offers all essential accessories; pre finished and matching edgings in either glued or unglued, along with matching stylo pens for edge finishing.

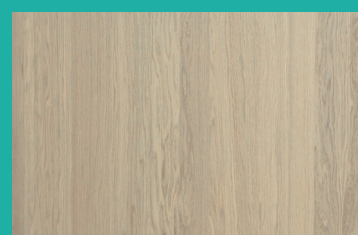

5 Décors:	Oak Natural	Oak Dune	Oak Steam	Oak Ristretto	Walnut Natural
